WE OWN OUR PRODUCTION

OUR OWN FACTORIES – CRUCIAL FOR HIGH QUALITY, LONG LIFE AND SUSTAINABILITY

Nine out of ten Blåkläder garments are made in factories we own, by our own co-workers. Just ten carefully selected textile producers supply us with 90 percent of all the fabric we use. This way, we can ensure that every garment is top quality. And importantly, strong control over our value chain makes it easier to improve working conditions and reduce our climate footprint.

We want you to be able to use our garments for as long as possible without having to buy new ones. That means the quality has to be really high. Fit and function should last over time. And our service to you should be so good that there are very few reasons to replace a garment. After all, we're convinced you have better things to do.

From the very beginning, it's been our ambition to own as much of our value chain as possible. Today, Blåkläder has eight factories of its own and 8,000 employees. We call them our family. Thanks to them, we can influence every part of production and make changes quickly whenever they're needed.

Our employees are the heart of the company. They should all have a good living wage, opportunities to develop and build a career – and, of course, secure employment. That's hygiene, but it's also the only way to achieve quality. When you hold a Blåkläder garment, what you feel is heart, security and true craftsmanship.

As if that weren't enough, high-quality garments are also good news for our planet. The longer you can use your garment, the better it is for the environment and the climate, since every new production causes emissions.

A brand new factory for the Blåkläder family

Dhaka, the capital of Bangladesh, is home to the world's leading expertise in knitted products. That's exactly where we have built a brand new factory. This finally gives us the capacity to produce our own knitted products such as T-shirts, polo shirts and base layers. Now we can proudly say that 90 percent of all garments we sell are made in our own factories.

When we build a factory of our own, it's up to us to think of everything – unlike if we were renting capacity from someone else. It's harder, but it gives us the chance to always choose the best possible options to reduce our environmental impact and provide good working conditions for everyone in the factory.

Like several of our other factories, the facility in Dhaka is equipped with solar panels that are expected to generate 40–50 percent of the factory's energy needs. It meets the requirements for LEED Platinum certification, partly by being built with sustainable materials.

Own shoe factory and own laboratory

In 2022, Blåkläder inaugurated its shoe factory, which has the capacity to produce 900,000 pairs of safety shoes annually. It also houses our high-tech test laboratory, which ensures that the shoes meet high standards of quality, function, ergonomics and safety. Because no one should have to put up with or throw away uncomfortable work shoes, we meticulously test every pair of safety shoes – just like we do with our clothing. Shoes that last longer both make customers happier and reduce unnecessary climate emissions.

A small number of carefully selected suppliers

For a long time, the textile industry has been dominated by huge networks of suppliers, each with just as many subcontractors. Makes no sense. For us, it's just as important that our partners ensure good working conditions and take responsibility for the climate and the environment as it is for us to do so ourselves.

The more subcontractors there are, the less oversight you have of the value chain – it's as simple as that. At Blåkläder, only ten suppliers provide ninety percent of all the textile material we buy. These are long-standing partnerships that have developed over many years. And there are few enough of them for us to maintain the relationships, gain full insight and ensure both high quality and maximally sustainable production.

When we own our production, we own our impact. And while it's not always easy, it's exactly how we want it. We have always considered it unthinkable to sell clothes without transparent and responsible production.

our own factories.*

SUSTAINABILITY LABEL

OEKO-TEX® MADE IN GREEN

For Blåkläder, it has always been unthinkable to sell clothes without transparent and responsible production. That's why we're putting our garments through one of the toughest certification processes in the clothing industry: OEKO-TEX® Made in Green.

As a customer, you should always be able to trust that the garments we deliver are responsibly made, with consideration for people, local communities and the planet. We also want all our employees to feel proud of working at Blåkläder. That's why we have chosen to have an independent and globally recognised third party verify our sustainability commitments.

The OEKO-TEX® Made in Green label shows that our value chain has been certified and audited against the industry's toughest sustainability standards. The production of our garments is assessed in terms of environmental and climate impact, quality and working conditions. The products must also be fully traceable and tested for harmful substances. This ensures that the clothes you buy will do the job for a long time, that the people who made them are safe, and that we've done everything we can to minimise emissions.

Carrying out such an extensive certification takes time and effort. So far, we've managed it without having to change suppliers – a clear sign that we've been doing things right from the start. But it also shows that sustainability is a complex field that requires time, patience and perseverance. Owning our own production has made us both more humble and given us a greater understanding of the long-term approach needed.

Our first goal is that 75 percent of our range will carry the Made in Green label. And we won't rest until all of it does. Feel free to ask us how far we've got.

Read more about Blåkläder's work with OEKO-TEX® at www.blaklader.com.

OUR PROMISE

LIFETIME GUARANTEE ON SEAMS

We're proud that our seams stand up to scrutiny. After all, hard-wearing workwear and fragile seams don't go together. That is why our lifetime guarantee on the seams of our garments is one of the many ways we combat wasteful consumption.

Our work trousers are made from exactly the kind of durable materials the job requires, with triple stitching and reinforcement in the most exposed areas. We have been doing this for over 60 years, but we'll never be finished or satisfied – we continuously work on improving our garments and testing new materials for maximum comfort and durability.

We can't really imagine it happening, but if a seam does split in an otherwise serviceable garment, we'll repair or replace it. Provided, of course, that the seams haven't been worn down by sharp edges and tools. They're not made of titanium (that would be uncomfortable).

It's important to us that you can use your garments for as long as possible without having to buy new ones. The fewer garments that are produced, the better it is for the environment and the climate, since most of the impact comes from manufacturing.

Look after your clothes and they'll last longer

Our materials, reinforcements and seams can withstand a lot. But when you work hard, your clothes work hard too. Give them a little love when they need it, just like we did in production. Wash at the right temperature and mend small holes before they get bigger, and your garment will last even longer.

YOUR PROFILE – OUR BUSINESS

What would a football team be without its emblem? Your workwear says a lot about who you are – both as a professional, and as a company. Our Value Added Services (VAS) include transfers, embroidery and specialised services such as lengthening or shortening of trousers, sewing on reflectors, and personal packing. And to make sure everything is done right, we do it in-house.

A DECORATIVE CRAFT

Embroidery conveys an exclusive and professional impression. We embroider your logo or name directly onto the garment. Sew-on patches and Velcro patches are becoming increasingly popular. We can sew names onto garments, but if several people use the same clothing, names can easily be switched using Velcro instead. All our embroidery cards are produced in-house, which means that changes and adjustments can be made quickly and easily. In addition to traditional embroidery, we offer embroidery on flame retardant garments, as well as embroidery with reflective thread for extra visibility.

TRANSFER

Heat transfers are a simple, cost-effective way to expose your company logo. They are easy to apply, provide a distinctive print with good colour reproduction, and they work on virtually all our garments. We use high-quality transfers that can withstand industrial washing. The type of transfer is customised to your needs. In addition to standard transfers our range includes, for example, reflective transfers for increased visibility, flameproof transfers for Multinorm garments, and transfers with embroidery effect for a more exclusive feel. With our plotter printer, we can offer small batches of name and text stickers. All heat transfers are included in Blåkläder's OEKO-TEX® STANDARD 100 certification.

SPECIALISED SERVICES

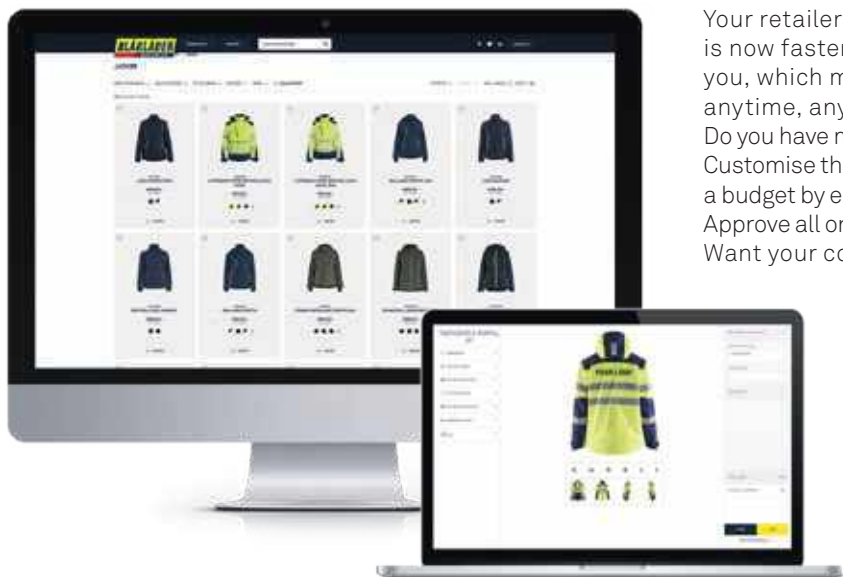

Want your order personally packed and delivered directly to the user's locker? No problem. We offer services such as personal packing and labelling on request. Despite our extensive range of sizes, you may find that your trousers are too long or too short. As we have our own sewing room, we can easily lengthen or shorten your trousers to your requirements. We handle garment adjustments and can add reinforcements, extra pockets and reflectors. We can also make customised garments if required.

FOR COMPANIES: SHOP BLÅKLÄDER ONLINE

FULL CONTROL OF YOUR WORKWEAR PURCHASES

With Blåkläder's business-friendly webshop, you can easily order workwear online – around the clock, wherever you are. As a buyer, you get full control over all your orders and can easily follow up on purchases by department or employee. All without hassle!

Your retailer is still your contact person, but ordering is now faster and easier. Blåkläder delivers directly to you, which means faster deliveries and better service – anytime, anywhere.

Do you have more than one department? No problem! Customise the range according to each department, set a budget by employee and get a full overview of the costs. Approve all orders simply before submitting them to Blåkläder. Want your company's logo on your workwear?

Our experienced service team prints your garments quickly and professionally, just the way you want them. Order your personal workwear with just a few clicks.

Find out more about how you can simplify your purchasing routines and shop smarter, at [blaklader.com](https://www.blaklader.com).

EASY FOR USERS, COST-EFFECTIVE FOR YOUR BUSINESS.

- ➔ Express ordering for a quick and easy process.
- ➔ Saved sizes for all garments to speed things up.
- ➔ Personal packing for deliveries direct to the customer's locker.

LESS ADMINISTRATION. MORE TIME FOR OTHER THINGS.

- ➔ Flexible tool with features tailored to your needs.
- ➔ Department-specific garments and related services.
- ➔ Spending limits to control expenditure.

X1900

A MODERN FAVOURITE AMONG CRAFTSMEN

The X1900 Blåkläder collection consists of modern, extremely durable and comfortable craftsman trousers in high-quality materials that put functionality above everything else.

The X1900 collection includes trousers in 4-way stretch fabric and stretch denim. The fantastic 4-way stretch fabric provides the perfect balance of quality, function, style and comfort. This means that Blåkläder's work trousers offer the best of both worlds in terms of performance and comfort.

The trousers' knee pad pockets are reinforced with CORDURA® stretch fabric on the outside and stretch fabric on the inside for increased freedom of movement.

Blåkläder never compromises on quality, and neither should you.

100% COTTON

These craftsman trousers made of 100% cotton. They are hard-wearing, comfortable and full of functional features that are designed to help you throughout your work day. Despite being crafted from a robust fabric, the trousers are airy and very pleasant to wear.

To give the trousers an extra light and comfortable feel, they have 4-way-stretch fabric panels at the seat, yoke, calves and pocket openings. They also feature reinforced knee pad pockets in CORDURA® stretch fabric, which adds to the unbeatable feeling of total comfort.

LIGHT AND COMFY IN 2-WAY STRETCH

The clothing in Blåkläder's 1750 series are all made from a thinner 2-way stretch material, with panels of 4-way stretch to bring even more comfort and flexibility.

The **1750/1751** trousers and **1752/1753** shorts come in two versions: with or without nail pockets. All the trousers, including the **1754** Pirate Shorts, have bottom-feed knee protector pockets reinforced with CORDURA® stretch. **1750** and **1752** also come in a women's cut.

1750 and **1751** is also available in a new quality, **1141**, which is an extremely durable denim fabric with stretch. The CORDURA® and cotton mix means good abrasion properties, and the stretch means high comfort.

1530

OUR CLASSIC CRAFTSMAN TROUSERS

The 1530 range is Blåkläder's classic basic model, our own original pair of trousers. A simple but high-performance model with hammer holders on each side, crafted from our best fabric. Since we released our first collection in 1986, we've been continuously improving and developing the 1530 range without changing its classic look. We expect it will remain a favourite among craftsmen for many years to come.

4-WAYSTRETCH FOR PAINTERS

This painter's collection is made from a soft and flexible material that stretches in all directions. The supple, slightly thinner, airy material provides high comfort without affecting the high durability. Also sophisticated details and customised pockets for putty knife, paint knife and brush, along with hanging pockets.

UV-PROTECTION

UV-PROTECTED TOPS

Blåkläder's UV tops effectively protect you against the sun's harmful UV rays. The tops are certified to the strict EN 13758-2 standard with a UV protection factor (UPF) of at least 40, which means that less than 5% of harmful UVA rays penetrate the fabric.

Wear our UV protective tops and you reduce the risk of immediate and long-term skin damage caused by the sun.

MERINO WOOL IN ALL WEATHERS

Merino wool is known for its ability to regulate body temperature. It provides insulation when it's cold and cooling when it's warm. In other words, it is ideal for year-round use.

The wool has an excellent ability to absorb and transport moisture away from the skin, while also possessing natural antibacterial properties that counteract bad odors. This allows you to use a merino wool garment several times before it needs to be washed, which is both practical and environmentally friendly.

Does it sound too good to be true? Try our new t-shirts, also available in long-sleeve versions and in several colors, and decide for yourself.

EN ISO 11611

Protective clothing certified according to EN ISO 11611 provides the wearer with protection against small splashes of molten metal as well as transitory contact with flame. The garments certified according to this standard are suitable for users who weld or work in a similar industry. The garments are classified based on their protective capacity against different levels of welding techniques which cause more or less spray and thermal radiation.

Class 1 - Protection against less dangerous welding techniques and situations, which cause less spray and lower thermal radiation.

Class 2 - Protects against more risky welding techniques and situations, which cause higher levels of spray and thermal radiation.

(A1) Limited flame spread, surface ignition method.

(A2) Limited flame spread, edge ignition method.

EN ISO 11612

Protective clothing certified according to EN ISO 11612 provides the wearer with protection against transitory contact with heat and flame. The heat can be convection heat, thermal radiation, metal splash or a combination of these.

The garments are classified based on the following parameters:

(A1) Limited flame spread, surface ignition method.

(A2) Limited flame spread, edge ignition method.

(B) Convection heat, scale 1-3 where 3 is best.

(C) Thermal radiation, scale 1-4 where 4 is best.

(D) Molten aluminium splash, scale 1-3 where 3 is best.

(E) Molten iron splash, scale 1-3 where 3 is best.

(F) Contact heat, scale 1-3 where 3 is best.

EN ISO 14116

Protective clothing complying with this International Standard is intended to protect the user against occasional and brief contact with small igniting flames, in circumstances where there is no significant heat hazard and without the presence of another type of heat. When protection against heat hazards is necessary, ISO 11612 is recommended.

Protective clothing according to EN ISO 14116 may consist of several separate garments, or a single garment with one or more layers. All assemblies claiming compliance with this standard shall achieve a limited flame spread index of 1, 2 or 3 when tested in accordance with ISO 15025.

Limited flame spread index

- Index 1 (flame spread, flaming debris and afterglow properties)
- Index 2 (as index 1 and included hole formation properties)
- Index 3 (as index 2 and included afterflame properties)

If the index is 1 (lowest level) the garment can only be used outside a garment with index 2 or 3. Index 1 may not have skin contact, e.g. neck and wrist.

EN 1149-5

Protective clothing that is certified to EN 1149-5 must be used as part of an earthed system to avoid electrostatic discharges in explosive atmospheres.

EN 61482-2

Garments certified in accordance with the EN 61482-2 standard provide a designated level of protection against the thermal hazards of an electric arc. The protective properties are designed to prevent the onset of second-degree burns. Other hazards of an electric arc, which the standard does not include, are molten metal splashes, pressure waves, electric shocks and hazardous gases created when a fabric is vaporised.

EN IEC 61482-1-1

Open arc test: in this test, fabrics and garments are exposed to an open electric arc. Each fabric or combination of fabrics is given a value expressed as cal/cm² (calorific value). This value is the maximum incident thermal energy to which a fabric can be exposed and still provide protection against second-degree burn injury: Arc Thermal Performance Value (ATPV), or when holes form in the fabric; Energy Break-Open Threshold (EBT). Both ATPV and EBT are calculated with a 50% probability of protection.

In 2019, an ELIM value was added to complement ATPV and EBT. This will specify the upper limit of incident energy to which a garment can be exposed without any risk of second-degree burn injury or the formation of holes in the fabric. The higher the calorific value of the fabric or garment, the greater the protection for the wearer. These tests can also be carried out on combinations of fabrics/garments and thereby improve thermal protective performance.

EN 61482-1-2

EN 61482-1-2 Box test: in this test, fabrics and garments are exposed to an electric arc confined in a box at a specific value. The arc current is 400 V and the duration is 500 ms. There are two classes for the test. The test gives a pass or fail result. Combinations of different garments or lined garments are often required to pass the box test Class 2.

	Electric arc	Time
Class 1/APC1	4kA – 168 kJ (400v)	500 ms
Class 2/APC2	7kA – 320 kJ (400v)	500 ms

EN 13034

Protective clothing that is certified to EN 13034 is not designed to provide full protection to the wearer when regularly handling chemicals. It is only suitable for use where there is a risk of exposure to weak chemical substances in spray form or accidental low-volume splashes. The clothing provides enough protection to allow the wearer time to remove the clothing before any chemicals on the garment penetrate the fabric.

Available in two variants:

TYPE 6 protective clothing tested as a full one-piece suit **TYPE PB [6]** not tested as a full one-piece suit. Any garment certified as PB [6] must be used in combination with other garments for full body protection and with other personal protective equipment.

INHERENT LIGHTWEIGHT

The material used in **1512** is an inherent fabric, meaning that the flame retardant is integral to the molecular structure of the fibre and can neither be worn nor washed away. This is what makes inherent flame-retardant garments durable, light-weight, comfortable and permanently protective. Ripstop guarantees extreme tear strength and wear resistance in exposed work environments.

Quality 1512 is produced without added PFAS, and the navy blue and black versions are partially dope dyed (spun dyed) which significantly reduces the climate impact.

The fabric meets the standard for EN 1149-3, EN ISO 11611, EN ISO 11612, EN IEC 61482-1-1, EN 61482-1-2, EN 13034, EN ISO 20471.

We recommend professional industrial laundering for extended garment life. The reflectors are designed to withstand heavy-duty use and industrial laundering. If the garment is not laundered professionally, follow the care instructions. Softener or detergent with bleach should not be used.

Quality 1512 is tested and approved after 50 industrial washes according to: EN ISO 20471, EN ISO 11612, EN ISO 11611, EN 61482-2, EN 1149 and approved after 20 washes according to EN 13034.

INHERENT STEEL

Quality 1519 is an inherent Class E3 fabric, specially designed for work in metal industries that deal with molten iron. The flame-retardant clothing in the Inherent Steel collection is designed to protect against splashing from molten metals. Garments in the Inherent Steel range include the jacket 4505, winter jacket 4515, trousers 1705 and the bib trousers 2605.

Quality 1519 is produced without added PFAS, and the navy blue and black versions are partially dope dyed (spun dyed) which significantly reduces the climate impact.

The fabric meets EN 1149-3, EN ISO 11611, EN ISO 11612, EN IEC 61482-1-1, EN 61482-1-2, EN ISO 20471, EN 13034, EN 15797.

We recommend industrial laundry for a longer product life (but not for lined winter jacket 4515). The reflectors are designed for hard wear and industrial laundry. If not washed professionally, follow the washing instructions. Do not use fabric softener or bleach detergents.

Quality 1519 is tested and approved after 50 industrial washes to: EN ISO 11612 (A1, B1, C1), EN 1149-3 and EN ISO 20471.

4505 INHERENT STEEL JACKET

1519 44% modacrylic, 30% cotton, 20% polyamide, 5% aramide, 1% antistatic, twill, flame resistant, antistatic, 320 g/m²

TREATED MULTINORM

1514 fabric is a flame-retardant blend and was selected for its superior combination of strength and comfort. The cotton-rich fabric ensures wearability and maximum protection in one. The material 1514 is produced without added PFAS.

The fabric is certified to EN 1149-3, EN IEC 61482-1-1, EN 61482-1-2, EN ISO 11611, EN ISO 11612, EN 13034, EN ISO 20471.

We recommend professional industrial laundering for extended garment life. The reflectors are designed to withstand heavy-duty use and industrial laundering. If the garment is not laundered professionally, follow the care instructions. Softener or detergents with bleach should not be used.

Quality 1514 is tested and approved after 50 industrial washes according to: EN ISO 11612 (A1, B1, C1) och EN 1149-3 and approved after 50 industrial washes to: EN ISO 20471.

INHERENT MULTINORM/WINTER

Work unhindered with the ultimate Multinorm collection for winter. A collection of flame resistant clothing built from scratch, with more than 60 years of experience behind each decision, ensuring your safety and comfort, whatever the weather. The new materials have been carefully tested with test pilots and work together to make the most durable, comfortable, warm and safe clothing ever.

Tackle those dark, demanding winter months with the complete Multinorm collection. Reflective tape, well-considered details, smart engineering and a modern design for first-class function and a professional look.

Quality 1534 is produced without added PFAS, and the navy blue and black versions are partially dope dyed (spun dyed) which significantly reduces the climate impact.

The fabric is certified to EN IEC 61482-1-1, EN 61482-1-2, EN 1149-3, EN ISO 11612, EN ISO 11611, EN 13034, EN ISO 20471, EN 343 – Water column rating: 12,000 mm.

INHERENT MULTINORM

Our **1513** fabric is an inherent material, which means that the flame retardant properties are naturally present in its fibres. The flame retardant qualities exist within the molecular structure of the fibre and cannot be worn off or washed away. Inherent garments are therefore durable, lightweight, comfortable to wear and guarantee life-long flame protection.

The fabric complies with the following standards: EN 1149-3, EN ISO 11611, EN ISO 11612, EN IEC 61482-1-1, EN 61482-1-2, EN 13034, EN ISO 20471, GO/RT 3275.

TREATED WELDING COLLECTION

Fabric **1501** is specially designed to meet the high safety requirements of demanding environments in which welding is performed.

The fabric is certified to EN 1149-3, EN IEC 61482-1-1, EN 61482-1-2, EN ISO 11611 Class 2, EN ISO 11612.

We recommend professional industrial laundering for extended garment life. The reflectors are designed to withstand heavy-duty use and industrial laundering. If the garment is not laundered professionally, follow the care instructions. Softener or detergents with bleach should not be used.

Quality 1501 is tested and approved after 50 industrial washes according to: EN ISO 11612 (A1, B1, C1) och EN 1149-3.

WOMENSWEAR INHERENT

The material used in **1512** is an inherent fabric, meaning that the flame retardant is integral to the molecular structure of the fibre and can neither be worn nor washed away. This is what makes inherent flame-retardant garments durable, light-weight, comfortable and permanently protective. Ripstop guarantees extreme tear strength and wear resistance in exposed work environments.

Quality 1512 is produced without added PFAS, and the navy blue and black versions are partially dope dyed (spun dyed) which significantly reduces the climate impact.

The fabric meets the standard for EN 1149-3, EN ISO 11611, EN ISO 11612, EN IEC 61482-1-1, EN 61482-1-2, EN 13034, EN ISO 20471.

We recommend professional industrial laundering for extended garment life. The reflectors are designed to withstand heavy-duty use and industrial laundering. If the garment is not laundered professionally, follow the care instructions. Softener or detergent with bleach should not be used.

Quality 1512 is tested and approved after 50 industrial washes according to: EN ISO 20471, EN ISO 11612, EN ISO 11611, EN 61482-2, EN 1149 and approved after 20 washes according to EN 13034.

TREATED MULTINORM

1514 fabric is a flame-retardant blend and was selected for its superior combination of strength and comfort. The cotton-rich fabric ensures wearability and maximum protection in one. The material 1514 is produced without added PFAS.

The fabric is certified to EN 1149-3, EN IEC 61482-1-1, EN 61482-1-2, EN ISO 11611, EN ISO 11612, EN 13034, EN ISO 20471.

Quality 1514 is tested and approved after 50 industrial washes according to: EN ISO 11612 (A1, B1, C1) and EN 1149-3 and approved after 30 industrial washes to: EN ISO 20471.

TREATED
FLAME RESISTANT

The **1516** fabric is a flame-retardant material designed for durability and comfort. The cotton-rich fabric ensures wearability and maximum protection in one. The material 1516 is produced without added PFAS.

The material 1516 is produced without added PFAS.

The fabric is certified to EN 1149-3, EN IEC 61482-1-1, EN 61482-1-2, EN ISO 11611, EN ISO 11612, EN 13034.

We recommend professional industrial laundering for extended garment life. The reflectors are designed to withstand heavy-duty use and industrial laundering. If the garment is not laundered professionally, follow the care instructions. Softener or detergents with bleach should not be used.

Quality 1516 is tested and approved after 50 industrial washes according to: EN ISO 11612 (A1, B1, C1) and EN 1149-3.

HI-VIS TROUSERS 4-WAY STRETCH

STRETCH IT!

CLASS 2

The **1122** Hi-Vis Trousers and the pirate pants **1123** have detachable nail pockets, and along with the **1124**, **1997** and **1197** they are one of several Blåkläder families of hi-vis trousers in wonderfully soft, supple 4-way stretch, which is both strong and stretchable in all directions. All the trousers are engineered to stand up to demanding jobs without compromising on comfort or fit.

The hi-vis trousers have advanced details and practical pockets with CORDURA® reinforcement, a bellowed leg pocket with zip, ruler pocket, front pockets, back pockets with flaps, and handy tool holders, such as a loop for a hammer holder.

Good ventilation is provided at the back of the knees and yoke, and inside the knee pocket. The knee protector pockets are reinforced with CORDURA® stretch externally and perforated stretch internally for improved mobility and ventilation. Leg ends with CORDURA® reinforcement for effective anti-wear protection. **1122** also come in a women's cut.

For our models with detachable tool pockets, you can purchase tool pocket **2170**, which is available in several colors.

STRETCH IT!

CLASS 1

The **1125** Hi-Vis Trousers have detachable nail pockets, and along with the **1126**, **1993** and **1193** they are one of several Blåkläder families of hi-vis trousers in wonderfully supple 4-way stretch, which is both strong and stretchable in all directions. The trousers are engineered to stand up to tough jobs without compromising on comfort or fit.

The hi-vis trousers have advanced details and practical pockets with CORDURA® reinforcement, a bellowed leg pocket with zip, ruler pocket, front pockets, back pockets with flaps, and handy tool holders, such as a loop for a hammer holder.

Good ventilation is provided at the back of the knees and yoke, and inside the knee pocket. The knee protector pockets are reinforced with CORDURA® stretch externally and perforated stretch internally for improved mobility and ventilation. Leg ends with CORDURA® reinforcement for effective anti-wear protection.

For our models with detachable tool pockets, you can purchase tool pocket **2170**, which is available in several colors.

EN ISO 20471

- PROTECTIVE CLOTHING WITH HIGH VISIBILITY

High-visibility clothing is undoubtedly the largest and fastest growing group of protective clothing today. Just like all other personal protective equipment, high-visibility clothing must be certified to be approved for use in the European market. The standard that specifies the performance requirements for high-visibility protective clothing is EN ISO 20471. As well as performance requirements, the design of high-visibility garments must also satisfy certain criteria.

The standard for high-visibility clothing is divided into three classes based on the minimum required amount of fluorescent and reflective material on the garment.

	CLASS 1	CLASS 2	CLASS 3
Fluorescent material	0,14 m ²	0,50 m ²	0,80 m ²
Reflective material	0,10 m ²	0,13 m ²	0,20 m ²

CATEGORY D CLASS 1  HI-VIS T-SHIRT 3337	CATEGORY X CLASS 2  HI-VIS SHORTS WITH STRETCH 1586	CERTIFICATION CLASS 2	CATEGORY D CLASS 1  HI-VIS T-SHIRT 3421	CATEGORY W CLASS 1  HI-VIS 4-WAY-STRETCH TROUSERS 1993	CERTIFICATION CLASS 1
CATEGORY D CLASS 1  HI-VIS SWEATER 3359	CATEGORY Y CLASS 2  HI-VIS TROUSERS 4-WAY STRETCH 1997	CERTIFICATION CLASS 2	CATEGORY A CLASS 2  HI-VIS TANK TOP 3575	CATEGORY V CLASS 1  HI-VIS SHORTS WITH STRETCH 1541	CERTIFICATION CLASS 2
CATEGORY B CLASS 2  HI-VIS SOFTSHELL JACKET 4900	CATEGORY Y CLASS 2  HI-VIS TROUSERS WITH STRETCH 1552	CERTIFICATION CLASS 3	CATEGORY C CLASS 2  HI-VIS SOFTSHELL JACKET 4877	CATEGORY W CLASS 1  HI-VIS TROUSER 1708	CERTIFICATION CLASS 3

READ MORE ABOUT THE DIFFERENT CERTIFICATION GROUPS AT [BLAKLADER.COM](https://www.blaklader.com)

Combination certification programme for Blåkläder's Hi-Vis collection:

Each item of high-visibility clothing has a class rating, but it is possible to combine two items of clothing to attain a higher class rating than that of an individual item. A combination of clothing must also be certified to ensure compliance with all requirements for each class.

Blåkläder's Combination certification programme makes it possible to wear combinations of clothing to attain a higher protection class. The garments in the Combination certification programme are divided into classification categories which are printed inside each garment. The class of protection attained for each combination of garments is shown in the following table and on the label inside each garment.

		TOPS				
		A	B	C	D	E
BOTTOMS	V	2	2	3	1	2
	W	2	2	3	1	2
	X	2	3	3	2	2
	Y	3	3	3	2	2
	Z	3	3	3	3	3

Example of combination certification; sweater item no. 3546 in classification category B and trousers item no. 1552 classification category Y are jointly certified as Class 3. Since Class 3 is the highest safety class, high-visibility garments in Class 3 are already at the highest level and are therefore not included in the programme.

RAIN

4302 RAIN JACKET HI-VIS LEVEL 2, **1302** RAIN TROUSERS HI-VIS LEVEL 2

CHOOSE A LEVEL BASED ON YOUR NEEDS

Our rainwear collection comes in Level 1, Level 2 and Level 3. Each level has a standard fit and function, but with different jacket lengths and with or without high-visibility features. All levels have welded seams and are perfect for craftsmen, gardeners, road and construction workers, fishermen and others who work outdoors.

LEVEL 1

RAIN
FIGHTERS

LEVEL 1 consists of basic styles in a pliable and lightweight fabric for those with jobs that require good range of motion and ease in putting on and taking off the garments as needed. The jackets feature smart functions such as a detachable hood, easily accessible pockets and storm closure to keep out the wet. They have a two-way zipper that extends all the way up into the collar and a detachable ID pocket on one of the jacket pockets. The trousers have an elastic band and drawstring at the waist. They have adjustable bottom hems and the legs are wide enough for easy changing without removing footwear.

WHAT DOES IT MEAN WHEN IT SAYS A GARMENT IS WATERPROOF AND BREATHABLE?

When we're outdoors in the rain and wind, we want clothing that keeps us dry and warm yet allows us to move freely without getting sweaty and clammy. All kinds of fabrics, from the ultra-thin stretchy to the more sturdy, classic rainsuits, are said to be both waterproof and breathable. How does that work?

Let's start with waterproofness. Fabric must normally have a waterproof rating of 3,000mm (3m) or more. Sounds simple enough, doesn't it? Well, it's not really that straightforward. There are lots of different test methods and each has different set-ups and procedures. So unless you can be certain that the same test method was used, it is tricky to compare figures.

The water column test is the most common method. This used to involve pouring water into a tube and then measuring how much pressure the fabric, pulled tight under the tube, could withstand. The principal is still the same except that the tests are now automated. The EN ISO 811 & JIS L 1092 are examples

of the test method. The rate at which water pressure is applied can differ in each test, producing very different figures.

It is the same for breathability, which can also be tested in numerous ways. The most common methods test the amount of water vapour that passes through fabric. Under two such tests, the JIS L 1099 & ASTM E96/E96M, the values should be high. Or fabric can be tested to measure its vapour resistance. In these tests, like the EN ISO 11092, the values should be low. So the same fabric, tested in different ways, can achieve completely different performance values.

Fabric is laminated with a membrane to make it waterproof and breathable. Explained simply, laminating is the adhesion of a thin plastic film to the fabric. There are two main types; one has tiny microscopic pores that let vapour out but are too small to allow water droplets to come in. The other type has a material in the lamination film

that wicks moisture from inside the garment and transfers it to the outside. This is most suitable for cold-climate clothing, as the wicking effect requires the temperature to be colder on the outside of the garment. In both types, the lamination film makes the fabric waterproof.

Applying a coating of plastic-based material to the back or front of the fabric is another way of making it waterproof.

The face side of the fabrics is usually reinforced with a water-repellent finish to maximise their waterproofing qualities. This ensures the raindrops roll off the surface and stops water from being absorbed by the outer fabric, preventing clothing from becoming heavy and cold. It also helps to repel dirt, which can otherwise cause water to seep through the membrane.

We have tested water resistance and the ability to breathe on our materials 1977 & 1987 with different test methods. As you can see from this chart, we get different results depending on which method we choose.

WATER

RESISTANCE

	EN ISO 811	EN ISO 811	JIS L 1092 B
Fabric	Water pillars tested according to the requirements in EN343. Pressure increase rate 10 cm/min.*	Water pillar. Pressure increase rate 60 cm/min.	Water pillar. Pressure increase rate 100 cm/min.
1916	≥20000 Pa/ ca 2000 mm (kl 4)	15 000 mm	15 000 mm
1917	≥20000 Pa/ ca 2000 mm (kl 4)	15 000 mm	15 000 mm
1918	≥20000 Pa/ ca 2000 mm (kl 4)	15 000 mm	16 000 mm
1977	≥20000 Pa/ ca 2000 mm (kl 4)	15 000 mm	17 000 mm
1987	≥20000 Pa/ ca 2000 mm (kl 4)	11 000 mm	22 000 mm

WHY A SHELL JACKET?

A shell jacket is perfect to use when dressing in layers. It is easy to keep warm and comfortable by adjusting what you wear underneath based on the weather. You could wear a fleece jacket underneath to stay cosy if the weather is cold and simply remove a layer if you get too warm. A wind and waterproof shell jacket gives you optimal protection against windy and rainy conditions.

- A shell jacket:
- Perfect to use when dressing in layers
 - Excellent mobility
 - Wind and waterproof outerwear

FLEECE

COMFORT AND PERFORMANCE

Blåkläder's lightweight, comfortable, warm and high-performance fleece jackets are always popular and stylish. Our range of jackets includes classic fleece and microfleece, which is a lighter, more elastic version of the fabric that is just as good at retaining warmth and has the same supple qualities.

A fleece jacket, and perhaps a microfleece jacket in particular, is ideal for wearing under other layers of clothing for extra warmth.

WIND/RAIN/COLD
3-LAYER

THE 3-LAYER PRINCIPLE:

ADAPT YOUR CLOTHING TO YOUR LEVEL OF EXERTION

When working hard it's important to keep warm and dry. The 3-layer principle means regulating your body temperature by adding or removing garments as the weather or work dictates.

TRANSPORT – LAYER 1

This layer wicks away moisture from the skin. An undergarment of wool or channel-stitched synthetic material absorbs moisture and wicks it away. Wool also regulates body temperature well. In cold weather it warms, and when the body heats up it cools. That means it is perfect to use even in clothing for warm environments.

Wool is famed for its self-cleaning properties. The wool's natural keratin works like a natural deodorant, keeping your garment fresher for longer.

INSULATE – LAYER 2

The intermediate layer insulates while wicking the moisture further away. As the temperature drops, the intermediate layer insulates against cold and lets you maintain your body heat. If you get hot and sweaty, regulate your temperature by lightening your intermediate layer. Put on a flannel shirt, a fleece garment or an artificial fibre undergarment.

Our fleece garments combine style and function. Fleece warms when it's cold. It's also easy to wash, dries quickly and wicks away moisture from the body.

PROTECT – LAYER 3

This is the shield that protects you from cold, rain and wind. The breathable function releases moisture from inside so it can evaporate on the outside. The material is lightweight, easy to care for, has taped seams and an especially durable surface layer.

Real outerwear for hard work should have: Hidden cuffs at the end of sleeves and legs/Snow locks over zips/ roomy, easy-access outer pockets/Warming fleece lining in front pockets/Drawstring for adjustable waist/ Removable lining/Zip all the way up the collar.

HAT, SHOES & SOCKS

They say it's probably a myth that you lose most of your body heat through your head. But myth or not, it's still extremely important to apply the 3-layer principle to the head, too. The scalp has lots of sweat glands and if there's anywhere you want to be dry and warm, it's your head.

If your feet become cold and wet you will freeze no matter what you have on the rest of your body. We recommend wearing functional socks that breathe and wick away moisture from the skin. Choose footwear that matches your profession and the time of year. In addition to protecting against water and oil, your footwear should be able to breathe, which is why leather, rather than synthetic, shoes are recommended. Shoes should never dry close to a heat source, so make sure you have at least two pairs of shoes so that one pair is always clean and dry when you need to go out to work.

VISIBLE

STAY IN SIGHT

Our collection, Visible, consists of modern workwear designed for environments where a certified alert protection is not required, but increased visibility is desirable.

The garments are fitted with strategically placed Hi-Vis details, reflectors and highly functional pockets – all to boost the comfort, ease and safety of doing your job.

THE SMART, WARMING VEST

The **3881** is a vest with clever warming technology from Clim8® that senses when your body temperature drops and makes sure you stay warm. This vest with a women's cut is quilted in the torso and back and has knitted polyester in the sides, enhancing its extraordinary comfort and freedom of movement.

The adaptable built-in technology uses a thermostat and computer to monitor your body temperature and uses battery-powered elements to regulate the heat in the vest. All this combined with the fact that the vest is washable makes this garment from Blåkläder and Clim8® a real hit!

3881

BLÅKLÄDER'S TRIPLE-DENSITY SOLE:

REVOLUTIONARY COMFORT FOR SAFETY SHOES

In today's demanding work environments, it's crucial to provide protection, comfort, and durability. Blåkläder's groundbreaking triple-density sole is a technical innovation that changes the game for safety shoes on every level.

A unique combination of three specially developed layers creates a sole that perfectly balances stability, shock absorption and grip. The innermost layer (1), made of high-density polyurethane (PU), is closest to the foot and ensures optimal stability. This layer guides the foot from heel to toe with precision, reducing the risk of awkward movements and injuries in harsh work environments.

THE NEXT LEVEL OF COMFORT

Beneath the stabilising layer is a softer PU mid-layer (2), specifically designed to absorb shocks. This layered structure cushions the strain on joints and muscles, resulting in a natural energy return with every step – a crucial factor in reducing fatigue during long workdays.

The outer layer (3) is made of slip-resistant nitrile rubber, ensuring excellent grip on wet and dry surfaces. This feature is essential for maintaining safety in industrial environments with slip risks or outdoor areas.

TECHNOLOGY MEETS TRADITION

The development of Blåkläder's range of safety footwear in general and the triple density sole in particular is the result of intensive and sustained collaboration between Blåkläder, footwear specialists, orthopedic engineers and industry experts. Using advanced PU injection technology and custom-made moulds in Blåkläder's own high-tech shoe factory in Sri Lanka, each layer has been optimized through extensive testing in real work environments.

THREE REASONS FOR TRUE COMFORT:

(1) STABILITY

Every step matters, especially when you're working in harsh conditions. The Triple Density Sole provides unmatched stability, guiding your foot from heel strike to push-off with precision. The carefully engineered midsole structure, developed and tested in Blåkläder's footwear lab, ensures optimal balance, control, and support – keeping you steady even in the most demanding environments.

(2) CUSHIONING

Forget tired feet. The Triple Density Sole is designed for maximum shock absorption and energy return, reducing strain on your joints and muscles. The unique combination of dual-density PU midsoles and a responsive ETPU insole distributes pressure evenly, keeping you comfortable no matter the shift's length. This is ergonomics at its best – to support your body every step of the way.

(3) GRIP

Work shouldn't come with a slip risk. STRIKER's nitrile rubber outsole delivers a toptier grip on wet and dry surfaces, ensuring solid traction wherever you go. Designed for safety without sacrificing comfort, this outsole is the final layer of a footwear system built for performance – giving you stability, cushioning, and grip, all in one.

ANTI-STATIC PROPERTIES AND ESD

All safety footwear in the Blåkläder range is antistatic. In addition, we offer footwear that is verified as ESD products. Both antistatic and ESD properties are evaluated in order to prevent electrostatic discharge. However, there is an important difference; the antistatic specification in the EN ISO 20345 standard is designed to protect the person wearing the footwear, while the requirements of the ESD standards (IEC61340-5-1) are designed to protect the product being handled by the person wearing the footwear.

Blåkläder's ESD safety footwear is approved by RISE, Research Institutes of Sweden; www.ri.se/en

RULES AND STANDARDS FOR SAFETY FOOTWEAR

It is important that your feet get the protection they deserve – this is essential in order for you to be able to continue with your work. The entire range of Blåkläder's safety footwear is certified in accordance with current standards and complies with European Personal Protective Equipment. You can feel confident that your protective shoes from Blåkläder comply with all important rules and requirements.

The table below shows the various protection classes.

SAFETY FOOTWEAR, TABLE FOR EN ISO 20345 STANDARD								
CLASS	I, II	I	I	I	II	II	I	I
	S8	S1	S2	S3/S3L/S3S	S4	S5/S5L/S5S	S6	S7/S7L/S7S
Slip resistance *	•	•	•	•	•	•	•	•
Toecap	•	•	•	•	•	•	•	•
Closed seat region		•	•	•	•	•	•	•
Antistatic properties		•	•	•	•	•	•	•
Energy absorption		•	•	•	•	•	•	•
Water repellent upper			•	•	–	–	•	•
Cleated outsole				•		•		•
Perforation resistance **				•		•		•
Water resistance							•	•
Material rubber/PU					•	•		

*** Slip resistance:**

Basic requirement (tested with NaLS, marked Ø if not tested) ☒

**** Perforation resistance:**

P = metal insert ☒

PL = non-metal insert, 4,5 mm nail ☒

PS = non-metal insert, 3 mm nail ☒

Classification explanation:

Class I Footwear made from leather or other materials, excluding all-rubber/-polymeric materials.

Class II Footwear made from all-rubber or all-polymeric materials.

The footwear categories include different levels of protection.

In addition to these properties other protection classes may be added:

P Penetration resistance

A Antistatic footwear

HI Heat insulation of sole complex

CI Cold insulation of sole complex

E Energy absorption of heel area

WR Water resistance

WPA Water penetration and absorption of upper part ☒

HRO Resistance to hot contact of outsole

FO Resistance to fuel oil

SC Scuff cap abrasion ☒

LG Ladder Grip ☒

SR Slip resistance (tested with glycerine) ☒

ESD IEC 61340-5-1: Intended to prevent electrostatic discharge that can damage equipment or products. Approved resistance less than 35 MΩ.

☒ = EN ISO 20345:2022 updates.

FIND THE RIGHT GLOVES FOR THE JOB

If you use Blåkläder gloves, the most important thing is to find the right gloves for the job at hand. In far too many work situations, people use the wrong type of gloves, or ones with insufficient protection. This increases the risk of injury and means the gloves might be discarded earlier than necessary.

From talking to our customers and reading industry reports, we know that hand injuries are common and sometimes hard to avoid. Even so, we believe that the right hand protection can reduce or even prevent many of these injuries. Our goal is to help you find the right gloves for the job and create a safer workplace. From a sustainability perspective too, it's absolutely vital to choose the glove, glove type and material that are appropriate for the job.

Here at Blåkläder, we want to help you and your company find the right gloves for your specific needs. Contact your Blåkläder representative for more information.

ANTI-STATIC PROPERTIES AND ESD

Safety gloves with antistatic properties are validated in line with EN 16350 and are intended to protect the wearer from risks connected to generating involuntarily electrostatic discharge. This is crucial in environments with highly flammable substances or risk of explosion. Related properties are found in gloves with ESD compliance.

Both antistatic and ESD properties are evaluated in order to prevent electrostatic discharge. However, there is an important difference; the antistatic specification in the EN 16350 standard is designed to protect the person wearing the gloves, while the requirements of the ESD standards (IEC 61340-X) are designed to safe guard the product being handled by the person wearing the gloves. Hence, the test methods and requirements differs between the antistatic- and the ESD-standards.

Blåkläder's ESD gloves is approved by RISE, Research Institutes of Sweden; www.ri.se/en

HEAVY-DUTY GLOVES

Work gloves designed for tasks that require tough, durable protection without the need for fingertip sensitivity.

The gloves feature a high cuff that provides added protection and makes them easy to put on and take off.

CUT PROTECTION GLOVES

Work gloves with a tight fit and cut protection, reducing the risk of cut injuries in the workplace. Recommended for users where there is a risk of cutting injuries, for example when working with glass, sheet metal or metalworking, as well as in warehousing and logistics. In construction work too, it's important to protect yourself against cuts.

Cut protection gloves are tested to EN388 and are given a rating in the TDM test (ISO 13997) between A and F, where F is the highest level of cut protection.

WELDING- AND HEAT PROTECTION GLOVES

Blåkläder's range of gloves that shield your hands from welding spatter, sparks and heat deliver the highest level of protection wherever you are working. The **2839** welding gloves are made of grain goatskin with seams stitched with aramid thread, which withstands high temperatures. The extra long cuff keeps welding spatter and sparks off the arms. Tight fit for increased dexterity.

The **2840** are perfect gloves when performing really heavy work in hot environments. Made of split leather with a thin cotton fleece lining to provide insulation and protection against extreme heat. Seams stitched with aramid thread for extra resistance to high temperatures. The extra long cuff keeps welding spatter and sparks off the arms.

2839

GLOVE SIZES

Remember it is important to choose the right size of gloves for your hands. Gloves that are too large may pose a safety risk and affect your grip. Gloves that are too small may be less comfortable and have a poor ergonomic fit. Use the chart to help you choose the right size of gloves for your hands.

Two things you should consider regarding size and measurement are:

- The circumference of your hand
- The length of your hand

Using a soft tape measure and with your hand open, measure the circumference of your hand around the knuckles. Measure the length of your hand from the line of your wrist to the tip of your middle finger.

 HAND SIZE LENGTH	GLOVE SIZE	CIRCUMFERENCE	LENGTH (MM)
	6	152	160
 HAND SIZE CIRCUMFERENCE	7	178	171
	8	203	182
	9	229	192
	10	254	204
	11	279	215

THIS IS HOW YOU FIND THE RIGHT SIZE!

Take your measurements according to the instructions below. Wear close fitting underwear when measuring. Width is measured around circumference. Check the sizes available in each garment before ordering. Not every size is made in each model.

HOW TO TAKE YOUR MEASUREMENTS

A: Chest

Measure horizontally around the widest part of the chest/bust. Make sure the measuring tape stays straight across the back.

B: Waist

Men and children: Measure horizontally at navel height

Women: Measure horizontally around the slimmest part of the waist.

C: Hips

Measure horizontally around the fullest part of the hips.

D: Inside leg

Measure from the crotch to the floor. Make sure the tape measure stays taut.

Measure the garment instead

Another way of measuring is to find your existing favourite garment, measure its length and width, and then compare it to Blåkläder's sizing chart. The chart can be found by selecting a product and then selecting size guide at [blaklader.com](https://www.blaklader.com).

MAINTAIN FUNCTION AND LIFE SPAN WITH THE RIGHT CARE

Washing, caring for and storing your workwear correctly is vital to maintain its comfort, function and durability. This is essential to guarantee the protective properties of the clothing. For example, the visibility of high-vis clothing is reduced if it gets dirty.

CARE INSTRUCTIONS

- Dirty clothes wear faster – wash them often to increase life span. The exception is wool, which doesn't need washing as often as it naturally repels dirt. Instead, air wool clothing and leave it to rest between uses.
- Store clothes that aren't being used in a dry, dark place.
- A worn garment with holes should be repaired before use.
- CE/UKCA-marked protective wear that has been damaged no longer offers full protection, and should be repaired or discarded. Protective clothing should be repaired using the right material and method to ensure it retains its protective properties. If you have any questions, please contact Blåkläder.

GENERAL RECOMMENDATIONS AND GUIDELINES FOR WASHING AND DRYING

- Each product has its own washing and drying instructions, which should be followed. They are specific to the materials and construction of each garment, which means there may be some exceptions to the general instructions below.
- If a product carries the text 'wash separately', it is important to do so.
- Close any zips, buttons and Velcro fastenings before washing. This reduces wear and extends the garment's life.
- Garments do not normally need pre-washing. They may however be pre-washed if heavily soiled.
- Do not use laundry detergents containing bleach.
- Follow the dosage instructions on the detergent packaging.
- We do not recommend using fabric conditioner/softener, both for environmental reasons and because it can impair the materials and function. For instance, it could reduce the water-repellent membrane's breathability.
- We do not recommend tumble drying the garments, instead hang them or dry flat.
- Prevent the clothing from shrinking by ironing after washing. Some garments may need to be reshaped slightly after washing to maintain their fit.
- Do not iron reflective parts.

FOOTWEAR

It is important that footwear is worn correctly so the specified protective characteristics can be met. Make sure that footwear is not excessively worn. Check the soles, seams and uppers are intact. Clean the footwear regularly using a brush. Remove any marks with a damp cloth and use shoe cream on leather parts of the upper. Never clean the footwear using petrol, acids or solvents. Store the footwear in a dry, well-ventilated place. Never dry damp shoes near heat sources such as fire places and radiators or in drying cabinets. Leave them to dry slowly in well-ventilated room temperature.

GLOVES

A damaged or ill-fitting glove provides less protection. Therefore, always check the gloves before use. Do not dry leather gloves in a tumble dryer, on a radiator or other heat source, as this makes the leather stiff and it may crack. Gloves should be stored in a cool, dry place. Please check the labels in your gloves for guidelines on correct care.

INDUSTRIAL WASHING

Industrial washing is large-scale professional laundry, as opposed to washing at home. Garments marked "Industrial washing/PRO label" can be washed in line with these instructions at a professional laundry.

The guidelines for industrial washing, ISO 15797, relate to temperature, washing and drying, as well as what detergents and reactive substances may be used.

A test-wash by the intended laundry service is recommended.

WASHING SYMBOLS

Here are explanations of some of the most common washing symbols that you can find on products from Blåkläder.

Normal wash at stated temperature

Gentle wash at stated temperature

Very gentle wash at stated temperature

Do not wash

Hand wash only

Do not bleach

Can be bleached

Do not tumble dry

Tumble dry max. 60°C, low temperature

Tumble dry max. 80°C, normal temperature

Hang dry

Dry flat

Drip dry

Do not iron

Ironing max. 110°C, low temperature without steam

Ironing max. 150°C, normal temperature

Ironing max. 200°C, high temperature

Do not dry clean

Dry clean

Mild dry clean

EN ISO 15797 Industrial wash

BLÅKLÄDER THE QUALITY FACTS

YOUR OPINION

We listen closely to our customers, the people who work hard in Blåkläder working clothes. Feel free to tell us what you think of our clothes and what we can do to improve them. Write a post on Facebook or send an email to info@blaklader.com.

ISO 9001:2015

Blåkläder is ISO 9001-certified. We are continuously working to create quality in our products, our manufacturing and our business.

ISO 14001:2015

We are ISO 14001-certified, which means that we are constantly working to be as considerate to the environment as possible.

COMPLIANT AND SAFE PRODUCTS

In addition to ensuring compliance with European chemicals legislation, Blåkläder also requires our suppliers and products to be one step ahead of the regulations. Through a process of ongoing dialogue and sharing of knowledge, together with random quality testing of our products, we guarantee the safety of our products for our customers.

DEVELOPMENT

We listen closely to the market's demands for function and quality. We have testers in various industries who help us adapt and improve our products. Our aim is for at least ten percent of our sales to come from products that have been developed over the previous 18 months.

TOUGH TESTING

Destroying clothing is a great way to develop it! Our lab tests wear and tear, rip and pull resistance, colour fastness and shrinkage. We regularly check our materials at independent test institutes.

MATERIALS

Different professions have different requirements for the fabric in their garments. We work with fabric producers worldwide to create materials that meet these tough demands.

OUR OWN DESIGN

Functional, comfortable garments with an attractive design. That's the result of long tradition, expertise and collaboration with users. We develop specially designed collections for companies that want to show off their own profile.

MANY SIZES AND COLOURS

Blåkläder has one of the industry's widest ranges of sizes and colours.

TAKING A BEATING SINCE 1959

Making rugged clothes is hard work. For over 60 years, we have developed our range of functional work clothes and shoes. Today we're one of Sweden's leading producers of heavy work clothes.

DISTRIBUTION

Blåkläder has offices in many European countries and in North America. We sell our garments via retailers around the world. We are constantly training the people who sell our products to ensure a high level of service throughout the distribution chain.

OUR FACTORIES

Through our factories, we have full oversight of the production process and are able to coordinate and limit the number of subcontractors. Limiting the number of business partners gives us greater transparency along the manufacturing chain. This allows us to maintain the highest standards of quality at every stage of production and ensure that our processes are sustainable.

STORES

Blåkläder works hard to ensure the customer gets their order in full and on time. That is why our warehouse covers 40,000 m², where 5 million garments are stored annually. It is from this central hub we send garments worldwide.

LIFETIME WARRANTY

Blåkläder offers a lifetime warranty on its seams. Professional staff and modern equipment make this warranty possible. If a seam splits, as long as it has not been torn by sharp edges or tools, we will repair it or replace the garment. We consider a garment's life span to be up until it has holes worn in it or is otherwise no longer useful.

BCI**BETTER COTTON INITIATIVE**

Since 2017, we have been sourcing our cotton via the Better Cotton Initiative; a programme aimed at reducing the environmental footprint of cotton production and improving the livelihoods and welfare of the farmers. Quite simply, improving the sustainability of cotton.

**OEKO
TEX****BLÅKLÄDER OEKO-TEX KONCEPT**

The Blåkläder garment assortment is Oeko-Tex standard 100 certified and our factories are run in line with STeP by Oeko-Tex. Also our major textile suppliers are STeP-certified, which in summary means that our garments are produced in a fully ESG compliant value chain and are free from known allergens and harmful substances. This enables us to Oeko-Tex Made in Green label models in our garments assortment.

**SA
8000****SA 8000**

Our factories operate in compliance with SA8000/ Amfori BSCI, which are global social accountability standards for decent working conditions for the employees. Both standards are based on the ILO's core conventions, the UN's Universal Declaration of Human Rights and the UN's Convention on the Rights of the Child. Performance in eight areas are reviewed and validated: child labour, forced labour, health and safety, free association and collective bargaining, discrimination, disciplinary practices, working hours and compensation

NO, WE DON'T HAVE
**A SUSTAINABILITY
QUICKFIX.**

PPE LEGISLATION/STANDARDS

Personal protective equipment protects the wearer from risks to health and/or safety. For personal protective equipment to be sold on the market in EU and EEA countries, it must comply with EU law: EU 2016/425, Regulation on Personal Protective Equipment (PPE). For the UK, Regulation (EU) 2016/425 applies as incorporated into UK law.

Under the regulation, it is the responsibility of the manufacturer to ensure that products entering the market meet the necessary legal requirements. The regulation is interpreted in standards, which specify the actual requirements for each particular type of PPE. These requirements relate to e.g. protective function, safe use, labelling, and technical documentation.

All PPE placed on the market in the EU and EEA must bear the CE mark. UKCA marking applies to the UK.

Under the legislation, personal protective equipment is divided into three categories:

Category I – Protective equipment of simple design where the end-user can assess the level of protection required. Products from Blåkläder: rainwear.

Category II – Protective equipment that is neither simple nor complex and protects against medium risks. Products from Blåkläder: hi-vis garments, safety footwear, protective gloves and knee pads.

Category III – Protective equipment of complex design that protects the wearer against dangers that may seriously or irreversibly damage health, the effects of which the end-user cannot identify in sufficient time. Examples of products from Blåkläder: garments that protect against the thermal effects of an electric arc.

EN ISO 20471

Protective clothing certified according to EN ISO 20471 provides the wearer with visibility in hazardous situations under all lighting conditions during the day and under the illumination of vehicle headlights in the dark. High requirements are set, including for the fabric's luminance and reflection.

The garments are classified based on the area of visible material and in combination with the reflector area and specific design requirements.

	Background material (m²)	Reflective material (m²)
Class 1	0,14	0,10
Class 1	0,50	0,13
Class 1	0,80	0,20

EN 17353

Garments certified according to EN 17353 are designed to enhance the wearer's visibility in environments with medium risk, where high-visibility clothing in accordance with EN ISO 20471 is not required, but increased visibility is still important to help prevent accidents.

EN 17353 garments are not intended for use on roads or in high-traffic environments, but rather in settings where enhanced visibility contributes to safety – especially at dawn, dusk, or in low-light conditions.

The standard defines requirements for the placement and surface area of fluorescent and/or retroreflective materials, depending on the intended use.

It is divided into three types:

- Typ A** – Enhanced visibility in daylight (fluorescent materials).
- Typ B1, B2 or B3** – Enhanced visibility in darkness (retroreflective materials).
- Typ AB** – Combination of visibility in both daylight and darkness.

EN 14404

Protects against the risks connected to work in the kneeling position. The protective equipment must help reduce and prevent injuries and risks that may occur immediately or over time.

- There are four types of knee protection;**
1. Protectors independently fastened on the leg.
 2. Protectors placed in kneepad pockets on trousers.
 3. Protectors not attached to the body.
 4. Protectors attached to devices with additional functions.

Knee protection class penetration resistance and is classified as follows:

Level 0: Don't have verified penetration protection and should therefore mainly be used when working on flat surfaces.

Level 1: Provide penetration protection (100 N) against e.g. small stones and are suitable for use on flat surfaces.

Level 1U: (added level from 2024) Provide penetration protection (100 N) against e.g. small stones and are suitable for use on uneven surfaces.

Level 2: Provide greater protection against penetration (250 N) when kneeling on very uneven and sharp surfaces.

EN 342

Protective clothing certified according to EN 342 provides the wearer with protection against cold surroundings. Requirements are set for insulation capacity as well as air permeability.

EN 343

Safety wear certified to EN 343 protect against precipitation such as rain or snow, fog and ground humidity. The garment and seams are tested for waterproofness, as well as breathability. Garments are classed according to their waterproofness (1–4) and breathability (1–4).

EN ISO 11611

Protective clothing certified according to EN ISO 11611 provides the wearer with protection against small splashes of molten metal as well as transitory contact with flame. The garments certified according to this standard are suitable for users who weld or work in a similar industry.

The garments are classified based on their protective capacity against different levels of welding techniques which cause more or less spray and thermal radiation.

Class 1 – Protection against less dangerous welding techniques and situations, which cause less spray and lower thermal radiation.

Class 2 – Protects against more risky welding techniques and situations, which cause higher levels of spray and thermal radiation.

(A1) Limited flame spread, surface ignition method.

(A2) Limited flame spread, edge ignition method.

EN 13034

Protective clothing that is certified to EN 13034 is not designed to provide full protection to the wearer when regularly handling chemicals. It is only suitable for use where there is a risk of exposure to weak chemical substances in spray form or accidental low-volume splashes.

The clothing provides enough protection to allow the wearer time to remove the clothing before any chemicals on the garment penetrate the fabric.

Available in two variants:

TYP 6 protective clothing tested as a full one-piece suit **TYPE PB [6]** not tested as a full one-piece suit. Any garment certified as PB [6] must be used in combination with other garments for full body protection and with other personal protective equipment.

EN ISO 14116

Protective clothing complying with this International Standard is intended to protect the user against occasional and brief contact with small igniting flames, in circumstances where there is no significant heat hazard and without the presence of another type of heat. When protection against heat hazards is necessary, ISO 11612 is recommended.

Protective clothing according to EN ISO 14116 may consist of several separate garments, or a single garment with one or more layers. All assemblies claiming compliance with this standard shall achieve a limited flame spread index of 1, 2 or 3 when tested in accordance with ISO 15025.

Limited flame spread index:

Index 1 (flame spread, flaming debris and afterglow properties)

Index 2 (as index 1 and included hole formation properties)

Index 3 (as index 2 and included afterflame properties)

If the index is 1 (lowest level) the garment can only be used outside a garment with index 2 or 3. Index 1 may not have skin contact, e.g. neck and wrist.

EN 1149-5

Protective clothing that is certified to EN 1149-5 must be used as part of an earthed system to avoid electrostatic discharges in explosive atmospheres.

EN ISO 11612

Protective clothing certified according to EN ISO 11612 provides the wearer with protection against transitory contact with heat and flame. The heat can be convection heat, thermal radiation, metal splash or a combination of these.

The garments are classified based on the following parameters:

(A1) Limited flame spread, surface ignition method.

(A2) Limited flame spread, edge ignition method.

(B) Convection heat, scale 1-3 where 3 is best.

(C) Thermal radiation, scale 1-4 where 4 is best.

(D) Molten aluminium splash, scale 1-3 where 3 is best.

(E) Molten iron splash, scale 1-3 where 3 is best.

(F) Contact heat, scale 1-3 where 3 is best.

EN 61482-2

Garments certified in accordance with the EN 61482-2 standard provide a designated level of protection against the thermal hazards of an electric arc. The protective properties are designed to prevent the onset of second-degree burns.

Other hazards of an electric arc, which the standard does not include, are molten metal splashes, pressure waves, electric shocks and hazardous gases created when a fabric is vaporised.

EN IEC 61482-1-1

Open Arc test: in this test, fabrics and garments are exposed to an open electric arc. Each fabric or combination of fabrics is given a value expressed as cal/cm² (calorific value). This value is the maximum incident thermal energy to which a fabric can be exposed and still provide protection against second-degree burn injury; Arc Thermal Performance Value (ATPV), or when holes form in the fabric; Energy Break-Open Threshold (EBT). Both ATPV and EBT are calculated with a 50% probability of protection.

In 2019, an ELIM value was added to complement ATPV and EBT. This will specify the upper limit of incident energy to which a garment can be exposed without any risk of second-degree burn injury or the formation of holes in the fabric.

The higher the calorific value of the fabric or garment, the greater the protection for the wearer. These tests can also be carried out on combinations of fabrics/garments and thereby improve thermal protective performance.

EN 61482-1-2

Box test: in this test, fabrics and garments are exposed to an electric arc confined in a box at a specific value. The arc current is 400 V and the duration is 500 ms. There are two classes for the test. The test gives a pass or fail result. Combinations of different garments or lined garments are often required to pass the box test Class 2.

	Electric arc	Time
Class 1/APC1	4kA – 168 kJ (400v)	500 ms
Class 2/APC2	7kA – 320 kJ (400v)	500 ms

GLOVES REQUIREMENTS, TESTS AND STANDARDS

EN 511

PROTECTIVE GLOVES THAT PROTECT AGAINST THE COLD

Performance level	
Test	Levels
Convective cold	1-4, 4 being best
Contact cold	1-4, 4 being best
Ability to withstand water (5 minutes)	0 or 1 *

* 0 = Water penetration after 5 minutes.

1 = No water penetration after 5 minutes.

X = The property is not applicable to the current glove model.

Explanation of performance levels			
Performance level	Lowest conditions for use [°C] Low activity	Lowest conditions for use [°C] Medium activity	Lowest conditions for use [°C] High activity
1	-	10	-15
2	-	0	-30
3	8	-15	-
4	-10	-30	-

The table is relevant for ambient air temperature at a wind speed of 0.5 m/s.

EN 388

PROTECTIVE GLOVES AGAINST MECHANICAL RISKS

In this standard, gloves are tested for the following risks:

- Abrasion Resistance
- Cut resistance
- Tearing Strength
- Puncture resistance
- ISO Cut Resistance

For each test, a result is obtained according to the table below.

Performance level					
Test	Level 1	Level 2	Level 3	Level 4	Level 5
Durability (Number of cycles)	100	500	2000	8000	-
Cut resistance Coupe (Index)	1,2	2,5	5,0	10,0	20,0
Tear resistance (N)	10	25	50	75	-
Puncture resistance (N)	20	60	100	150	-
Impact Protection	Yes = P, No = No remarks				

0 = The glove lies under the lowest performance level for the specific test.

X = The property is not applicable to the current glove model

Performance level						
Test	Level A	Level B	Level C	Level D	Level E	Level F
Cut resistance TDM (N)	2	5	10	15	22	30

EN 407

PROTECTIVE GLOVES AGAINST THERMAL RISKS (HEAT AND/OR FIRE)

	PROTECTION RATING
Resistance to Flammability	1-4, 4 being the highest rating*
Contact Heat Resistance	1-4, 4 being the highest rating**
Convective Heat Resistance	1-4, 4 being the highest rating**
Radiant Heat Resistance	1-4, 4 being the highest rating**
Resistance to Small Splashes of Molten Metal	1-4, 4 being the highest rating**
Resistance to Large Splashes of Molten Metal	1-4, 4 being the highest rating**

* If Resistance to Flammability is not assessed, use 

** If Resistance to Flammability is not assessed or Class 1 or 2 is achieved, a max. rating of Class 2 is given for other thermal risks.

EN 12477

PROTECTIVE GLOVES FOR WELDERS

Additional requirements to EN 407 specifically for welding gloves, including longer length. The gloves are classed as type A and/or B;

	REQUIREMENT FOR MINIMUM PERFORMANCE LEVEL		
Requirement	EN standard	Type A	Type B
Resistance to abrasion	EN 388	2	1
Cut resistance	EN 388	1	1
Tear resistance	EN 388	2	1
Puncture resistance	EN 388	2	1
Protection from ignition	EN 407	3	2
Contact heat	EN 407	1	1
Convective heat	EN 407	1	-
Small splashes of molten metal	EN 407	3	2
Flexibility	EN 420	1 (min Ø 11 mm)	4 (min Ø 6,5 mm)

EN ISO 21420**EN ISO 21420****EN ISO 21420 PROTECTIVE GLOVES
– GENERAL REQUIREMENTS AND TEST METHODS**

The general requirements for protective gloves include:

- Standardised dimensions for sizes; with respect to the size of the hands the gloves are to fit.
- The gloves should not impose a risk or cause injury or allergies.
- The glove material should have a pH value between 3.5 and 9.5 (neutral).
- The highest permitted value for chrome VI in the glove material is 3 mg/kg.
- Marking of gloves and packaging is also standardised.

**EN 16350****PROTECTIVE GLOVES
– ELECTROSTATIC PROPERTIES**

Gloves that protect against the risk of inadvertent electromagnetic discharge (spark) in an environment with an explosive atmosphere.
(vertical resistance $R_v < 1,0 \times 10^8 \Omega$).

**License for using the standard**
